Yuliia:

Done Well:

- Nice work using semantic tags such as header, nav, footer and section!
- Awesome work with your links. They're fully functional and navigate the user to correct the file/page!
- Well done adding alt attributes to your images in case they don't load.
- Well done using BEM for this sprint!
- Your website matches the mockup very closely with very minor discrepancies!
- I ran your HTML markup on an HTML validator and it passed all tests! Great work!
- Overall, an amazing sprint! Keep it up!

Things to Work on:

- Make sure to delete commented or unused code. For example, you have commented styles on line 15 of your globals.css. This helps in making your code look cleaner and more professional.
- Make sure to consistently use em or rem instead of px to make sure your units are responsive
- The Shop Now link in the nav bar seems to be broken. That is, when you click on that link, the page cannot be found. To fix this, the path to the menu page in the href should be "./pages/menu.html"
- In your globals.css, it's recommended that you reset your padding as well as your margins (padding: 0). Also, you can use the box-sizing: border-box to make sure all of your child elements respect the boundaries of their parents
